2. Citations and explanations see separate sheet

#### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made: see separate sheet

## **EXAMINATION REPORT - SEPARATE SHEET**

#### Re Item V

1. Reference is made to the following documents:

D1: EP-A-0 193 330, cited in the application

D2: US-A-5 827 721

D3: JONES C. P. AND SAWYER R. T.: 'Heparin inhibits mammalian, but not leech hyaluronidase.' THROMBIN RESEARCH, vol. 55, no. 6, 1989, pages 791-796

- 2. The present application concerns a hyaluronidase from the leech species Hirudinaria manillensis having a molecular weigth of 53-60 dependent on glycosylation, an isolation and purification process for said enzyme, a DNA coding for it, a recombinant protein with hyaluronidase activity, an expression vector, a host cell as well as a pharmaceutical composition comprising said protein and its use in the manufacture of a medicament for treating myocardial, cardiovascular and thrombotic disorders and tumors.
- 3. In view of the documents cited in the ISR, only the subject-matter of claims 1-17 and 20 has to be regarded as being novel in the sense of Article 33(2) PCT. Claims 18 and 19 referring to pharmaceutical compositions comprising additionally a pharmaceutically active compound or heparin, respectively, are objected to as lacking novelty as pharmaceutical compositions in general as well as pharmaceutical compositions comprising heparin are well known formulations in the art and widely used in medical treatment.
- 4. Claims 1-17 and 20 are objected to for the following reasons as they do not appear to involve an inventive step (Article 33(3) PCT):

Document D1, which is considered as closest prior art, discloses hyaluronidases having a molecular weight of 28.5 kDa, which were isolated from Hirudinaria manillensis and Poecilobdella granulosa, leech species of the same subfamily of Hirudinariinae. The subject-matter of claims 1-4 and 6 differ from D1 by a molecular weight of 53-60 kDa dependent on glycosylation, an isoelectric point of 7.2-8.0 or a specific activity of >100 kU/mg protein, respectively.

The problem to be solved by the present invention may be regarded as providing an alternative hyaluronidase from Hirudinaria manillensis. However, a SDS-PAGE of a purified hyaluronidase preparation in D1 reveals in addition to the protein of 28.5 kDa

### **EXAMINATION REPORT - SEPARATE SHEET**

disclosed in the document a band of approx. 60 kDa (D1, Fig. 4, lane 4). As the molecular weight is only a non-limiting parameter and not sufficient to distinguish a protein unambiguously from the prior art, the 60 kDa band in D1 might correspond to the enzym of the present application. Even if it is not the case, D1 indicates at least the presence of further hyaluronidases with higher molecular weight in Hirudinariinae. In order to solve the technical problem, a skilled person would try to isolate such proteins using common techniques and arrive at the subject-matter of claims 1-4 and 6 in an obvious way. The same applies to claim 5, because its subject-matter can be obtained by simply sequencing the isolated protein.

Furthermore, D1 discloses the preparation of a crude extract by homogenising the leech heads and ammonium sulphate precipitation followed by gel chromatography.

The subject-matter of claim 7 concerning the process of hyaluronidase purification differs from this disclosure in purifying the crude extract via various additional chromatography steps. However, a skilled person trying to solve the technical problem, i.e. looking for a purification method for crude hyaluronidase extracts, would have knowledge of D2, where the same order of chromatographic columns is used to isolate a hyaluronidase from bovine testicular extracs (D2, example 1). He/she would immediately combine the teaching of both documents and arrive at the subject-matter of claims 7-9 in an obvious way.

Claims 10-15 are also lacking an inventive step, because said claims add only subjectmatter which is obtainable by workshop modifications.

Claims 16, 17 and 20 referring to a pharmaceutical composition comprising the enzyme and its use for the manufacture of a medicament are objected to as lacking inventivity. Besides the fact, that D1 describes the use of leech hyaluronidase in pharmaceutical therapy for myocardial ischemia, thrombosis or tumors (D1, page 6, line 33 - page 8, line 12), Document D3 explicitely discloses that leech hyaluronidase is superior for the treatment of myocardial disorders and thrombi than mammalian enzymes, because it can be used in combination with heparin (D3, page 791, last paragraph).

Therefore, none of claims 1-17 or 20 meets the requirements of Article 33(3) PCT.

## **EXAMINATION REPORT - SEPARATE SHEET**

#### Re Item VIII

5. Claims 1-4, 6, 16, 18 and 19 are objected to as lacking clarity according to Article 6 **PCT** for the following reasons:

Claims 1-4 and 6 are drawn to a leech hyaluronidase having a molecular weigth of 53-60 dependent on glycosylation, an isoelectric point of 7.2-8.0 or a specific enzymatic activity of >100 kU/mg protein, respectively. However, these parameters alone are not sufficient to characterise the subject-matter of said claims unambiguously and to distinguish it from the prior art.

Claim 16 referring to a protein as a medicament dose not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved which merely amounts to a statement of the underlying problem. The technical features necessary for achieving this result should be added.

Claims 18 and 19 referring to pharmaceutical compositions in general are not supported by the description as their scope is broader than justified by the description and drawings. Moreover, the matter for which protection is sought is completely unclear. A skilled person is not enabled to determine which technical features are necessary to perform the invention.
